

Admin Access Bugs and Edge Cases Report

QA audit date: 2026-07-29 | Important bugs and edge cases only | No code changed

Module	Severity	Main bug	Important edge case	Best solution
Dashboard	Medium	KPI/chart totals can differ from Leads, Prospects, Customers, and Reports.	Deleted leads, converted leads, won/lost prospects, timezone boundary.	Use one backend metric rule everywhere.
Notifications	Medium	Links can point to deleted or inaccessible records. Bulk read may miss old unread rows.	200+ unread, deleted record, dismissed announcement.	Resolve links by permission and update all unread rows.
Users	High	Stats can use current page only. List limit has no max. UI/API validation differs.	Seat limit, duplicate email, disable self, large user list.	Backend stats, capped limits, shared validation.
Items	Medium	Stats can use current page only. Referenced item changes can affect old records.	Item used in quotation, duplicate code, goods/service switch.	Backend stats, snapshots, warning before deactivate/delete.
Leads	High	Product interest item needs stronger org validation. Failed uploads can orphan files.	Cross-org item ID, bad import, double conversion.	Validate item by org and clean failed uploads.
Prospects	High	Prospect delete can remove sales history if soft-delete/terminal checks are missing.	Won/lost delete, past follow-up, duplicate conversion.	Soft-delete and protect terminal records.
Quotations	High	Reject action has no reason field though backend requires it. Invalid edit paths are visible.	Reject without reason, approved quote edit, missing PDF assets.	Add reason field and hide invalid actions.
Customers	Medium	Approved quotation may not appear as customer; totals can mismatch.	Won prospect without quote, approved quote without won prospect.	Define one customer conversion rule.
Reports	High	All tabs can be computed per request. Limit/export size is risky and exports lack audit.	Large date range, invalid dates, CSV export.	Compute requested tab only, cap limits, audit exports.
Profile	High	Organization PDF asset upload needs backend role enforcement.	Invalid image, oversized file, failed update.	Validate files and permissions server-side.
Settings	Medium	Settings is mostly billing, but text mentions preferences. Read-only billing can confuse.	Lapsed subscription, invalid tab, mobile view.	Match page copy to real capability or add preferences.
Help	Low	Help is thin and can drift from actual Admin permissions.	Search billing, password reset, quotation rejection.	Keep FAQs synced with permissions.
